

StrongARM - Automatic Rivet Machine

The machine that will Revolutionize the commercial truck brake shoe relining industry is finally here! The **StrongARM** automatic rivet machine was conceived by the engineers at GWI Engineering as a solution to the production demands of a historically labor intensive manual process. This fully adjustable servo-driven machine can automatically feed and hydraulically upset 4 rivets at a time, row after row after row. Just how fast is this machine? Follow the link below to watch a typical **StrongARM** in operation.
